1.Create a Master-Detail Relationship between two Custom objects and also create a Roll Up Summary Field to Calculate total number of records.

Solution:

### Step 1: Create Custom Objects

Assuming you have two custom objects, let's call them "College\_C" and "C Department\_C". If you haven't already created these objects, you can do so by going to Setup > Object Manager > Create > Custom Object.

The screenshot shows the Salesforce Setup interface with the following details:

- Header:** Includes the Salesforce logo, a search bar labeled "Search Setup", and various navigation icons.
- Breadcrumbs:** Shows "Setup" > "Object Manager" > "New Custom Object".
- Title Bar:** "SETUP" and "New Custom Object".
- Page Content:**
  - New Custom Object**
  - A message bar at the top states: "Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [Tell me more!](#) [Don't show this message again](#)".
  - Custom Object Definition Edit** section with buttons: "Save", "Save & New", "Cancel". A note says "I = Required Information".
  - Custom Object Information** section:
    - The singular and plural labels are used in tabs, page layouts, and reports.
    - Label:** college (Example: Account)
    - Plural Label:** colleges (Example: Accounts)
    - Starts with vowel sound:**
  - The Object Name is used when referencing the object via the API.**
  - Object Name:** college (Example: Account)
  - Description:** (Large text area)
  - Context-Sensitive Help Setting:**
    - Open the standard Salesforce.com Help & Training window
    - Open a window using a Visualforce page
  - Content Name:** (dropdown menu) -None-
  - Enter Record Name Label and Format** section:
    - The Record Name appears in page layouts, key lists, related lists, lookups, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always called "Name" when referenced via the API.
    - Record Name:** college Name (Example: Account Name)
    - Data Type:** Text (dropdown menu)
  - Optional Features** section (checkboxes):
    - Allow Reports
    - Allow Activities
    - Track Field History
    - Allow in Chatter Groups
    - Enable Licensing
  - Object Classification** section (checkboxes):
    - Allow Sharing
    - Allow Bulk API Access
    - Allow Streaming API Access
  - Deployment Status** section (radio buttons):
    - In Development
    - Deployed
  - Search Status** section (checkbox):
    - Allow Search
  - Object Creation Options (Available only when custom object is first created)** section (checkboxes):
    - Add Notes and Attachments related list to default page layout
    - Launch New Custom Tab Wizard after saving this custom object
  - Buttons at the bottom: "Save", "Save & New", "Cancel".

Second custom objects, let's call them  
"Department\_C"

The main form is titled 'Custom Object Definition Edit' and contains sections for 'Custom Object Information', 'Enter Record Name Label and Format', 'Optional Features', 'Object Classification', 'Deployment Status', and 'Search Status'. The 'Custom Object Information' section includes fields for 'Label' (set to 'department'), 'Plural Label' (set to 'departments'), and 'Object Name' (set to 'department'). The 'Enter Record Name Label and Format' section includes a 'Record Name' field (set to 'Department Name') and a 'Data Type' dropdown (set to 'Text'). The 'Optional Features' section has several checkboxes, most of which are checked. The 'Object Classification' section has three checked checkboxes. The 'Deployment Status' section shows 'Deployed' is selected. The 'Search Status' section has an unchecked checkbox for 'Allow Search'. At the bottom are 'Save', 'Save & New', and 'Cancel' buttons.

**Custom Tabs**

You can create new custom tabs to extend Salesforce functionality or to build new application functionality.

Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed external web applications and content within the Salesforce window. Visualforce tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app. Lightning Page tabs allow you to add Lightning Pages to Lightning Experience and the mobile app.

In addition, you can use the Salesforce mobile app to assign permission sets to a user. Download Salesforce from the App Store or Google Play: [iOS](#) | [Android](#)

## Step 2:

### Permission Sets:

- Create two permission sets, one for User A and one for User B.

### Object-Level Security:

- In each profile and permission set, set the object-level security for the Account object to "Read" to ensure that both User A and User B can view Account records.

### Record-Level Security:

- Implement record-level security using Criteria-Based Sharing Rules.
- Create a sharing rule that shares Account records owned by User A with User A and records owned by User B with user B.
- For the sharing rule criteria, specify that records owned by User A are shared with user A, and records owned by User B are shared with User B.

### Ownership:

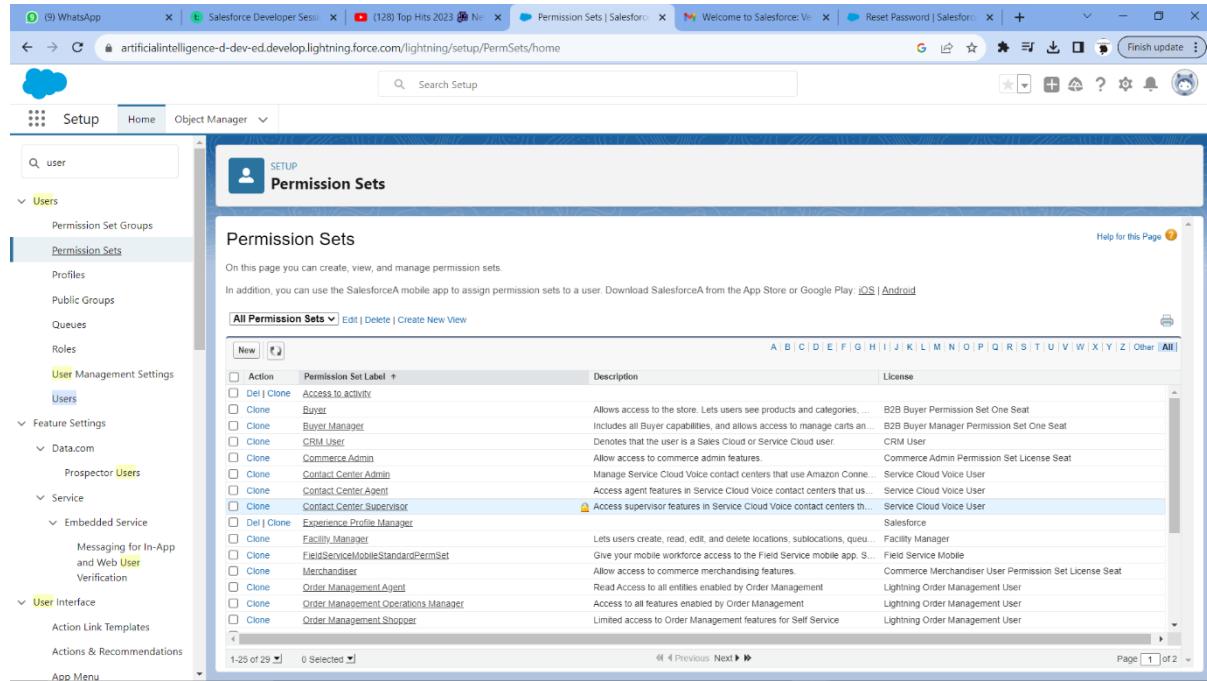

- Ensure that the Account records are owned by the respective users, with User A owning their records and User B owning their records.

## Organization-Wide Defaults:

- Set the organization-wide defaults for the Account object to "Private" to ensure that records are private by default.

## Testing:

- Test the setup by logging in as User A and User B separately to verify that they cannot access each other's records.

The screenshot shows the Salesforce Setup interface with the 'Permission Sets' page open. The left sidebar is collapsed, and the main content area displays a table of permission sets. The table columns are 'Action', 'Permission Set Label', 'Description', and 'License'. The 'Permission Set Label' column lists various roles and profiles, such as 'Access\_to\_Activity', 'Buyer', 'Buyer\_Manager', 'CRM\_User', 'Commerce\_Admin', 'Contact\_Center\_Admin', 'Contact\_Center\_Agent', 'Contact\_Center\_Supervisor', 'Experience\_Profile\_Manager', 'Facility\_Manager', 'FieldServiceMobileStandardPermSet', 'Merchandiser', 'Order\_Management\_Agent', 'Order\_Management\_Operations\_Manager', and 'Order\_Management\_Shopper'. The 'Description' column provides a brief overview of the permissions granted by each set. The 'License' column indicates which license is required for each set. The table includes pagination at the bottom, showing '1-25 of 29' and '0 Selected'.

## Step 7:

Now to give the specific delete access to the user click on edit on the Account and then enable the read,create,edit and the delete on it so that the permission set will have a specific special access on it. once it has been done click on save and then click on manage assignment.

The screenshots show the Salesforce Setup interface for creating a new Permission Set named 'permission12'. The left screenshot shows the initial configuration where 'Edit' is checked for all object permissions. The right screenshot shows the configuration after 'Delete' has been checked for the 'Edit' permission.

**Object Permissions (Left Screenshot):**

Permission Name	Enabled
Read	<input type="checkbox"/>
Create	<input type="checkbox"/>
Edit	<input checked="" type="checkbox"/>
Delete	<input type="checkbox"/>
View All	<input type="checkbox"/>
Modify All	<input type="checkbox"/>

**Object Permissions (Right Screenshot):**

Permission Name	Enabled

Create	<input checked="" type="checkbox"/>
Edit	<input checked="" type="checkbox"/>
Delete	<input checked="" type="checkbox"/>

## Step 8

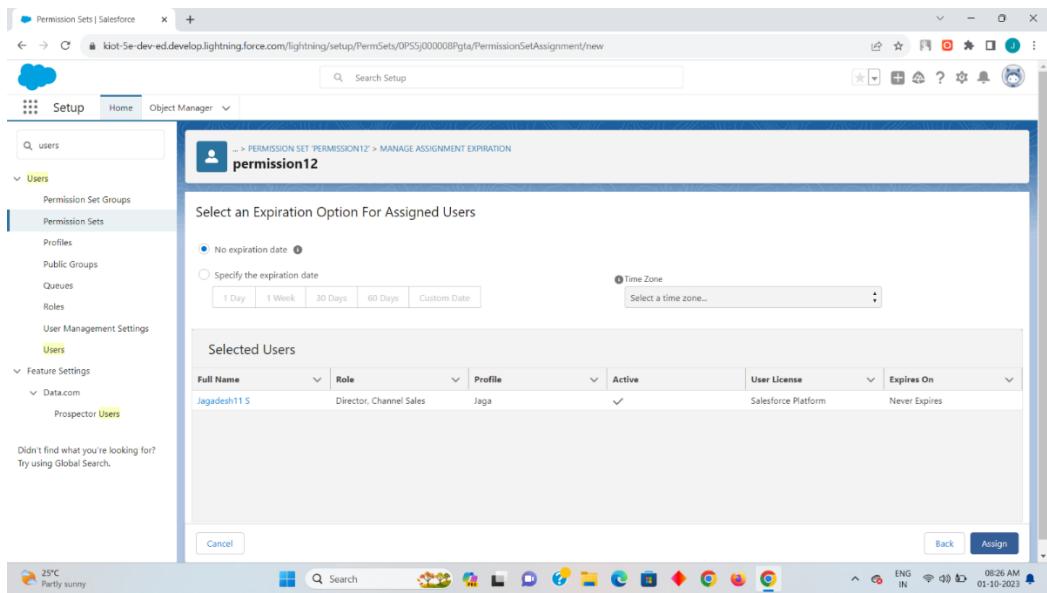

Now click on add assignment there you will find your two created users click on any one user to give a special access as delete on it and then click on assign so that the specific selected user can have a special access as delete on it.

The screenshot shows the 'Permission Sets | Salesforce' page. The left sidebar is expanded, showing 'Users' selected under 'Permission Sets'. The main content area is titled 'permission12' and shows a section titled 'Current Assignments' with a cactus and sun icon. Below it, a message says 'No assignments defined.' A small note at the bottom left says 'Didn't find what you're looking for? Try using Global Search.'

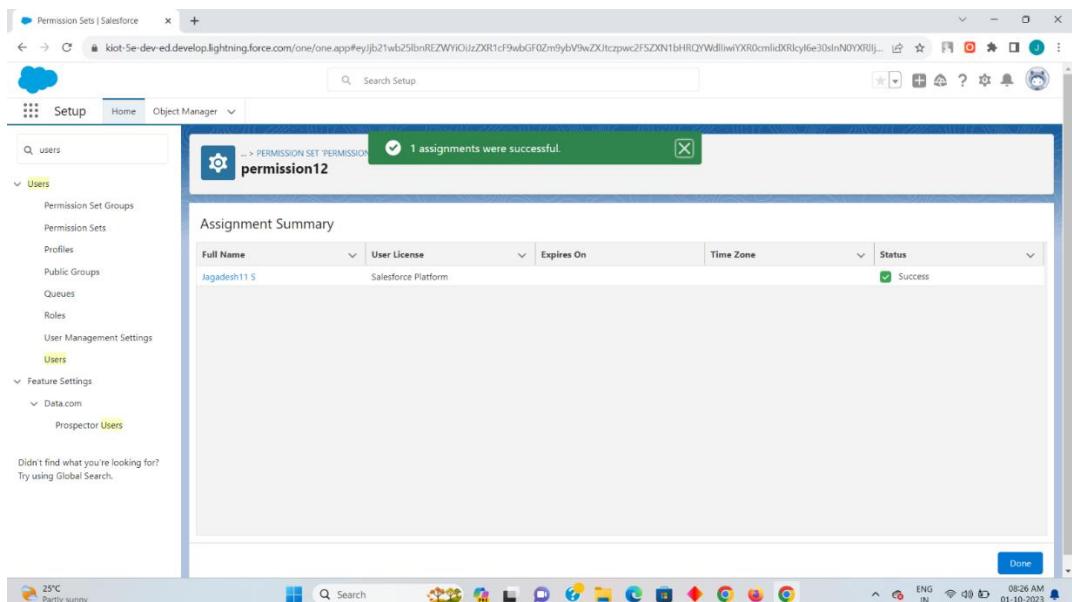

This screenshot shows the 'PERMISSION SET permission12 > MANAGE ASSIGNMENT EXPIRATION' dialog. It has a header 'Select Users to Assign' and a sub-header 'All Users'. A search bar contains 'jagadesh'. The table lists four users: Jagadesh S, Jagadesh S, Jagadesh11 S, and Jagadesh22 S. The 'Jagadesh11 S' row is highlighted with a blue selection box around its entire row. A tooltip above the table says 'Roles, Alias, and Profile aren't searchable. Use filters or sort on these fields instead.' Buttons for 'Cancel' and 'Next' are at the bottom.

This screenshot shows the same 'PERMISSION SET permission12 > MANAGE ASSIGNMENT EXPIRATION' dialog. The 'Jagadesh11 S' user from the previous screenshot is now checked in the list. Other users listed are Jagadesh S, Jagadesh S, and Jagadesh22 S. The 'Next' button is visible at the bottom right.

## Step 5: Create a Lightning Application to Render Lightning Runtime for Flow in a Visualforce Page

Now we will create a Lightning Application that declares a dependency on the **lightning:flow** component.

1. Click **Setup | Developer Console**
2. Navigate to **File | New | Lightning Application**
3. Enter a **Name (VFPagetoLC)** field, make sure to select the **Lightning Out Dependency App** checkbox.
4. Click **Submit**.
5. Copy code from [\*\*GitHub\*\*](#) and paste it into your Lightning Application.
6. **Save** your code.

The screenshot shows the Salesforce IDE interface. The top menu bar includes File, Edit, Debug, Test, Workspace, Help, and navigation icons. A tab labeled "VFPageToLC.app \*" is active. The main editor area contains the following code:

```
1 <aura:application access="global"
2     extends="ltng:outApp"
3     implements="ltng:allowGuestAccess">
4     <aura:dependency resource="lightning:flow"/>
5 </aura:application>
```

The code defines a Lightning Application component with attributes for access, extension, implementation, and dependency.

## Step 6: Create a Visualforce Page and Embed Your Flow Into It

Now we will create a Lightning Application that declares a dependency on the **lightning:flow** component.

Add the Lightning Components for Visualforce JavaScript library to your Visualforce page using the **<apex:includeLightning/>** component. In the Visualforce page, reference the dependency app. Then write a JavaScript function that creates the

# component on the page using `$Lightning.createComponent()`

1. Click **Setup**.
2. In the Quick Find box, type **Visualforce Pages**.
3. Clicks on the **New** button.
4. Copy code from [GitHub](#) and paste it into your visualforce page
5. Click **Save**.

The screenshot shows the Salesforce Visualforce Page editor for a page named 'Survey'. The 'Page Information' section includes fields for Label ('Survey'), Name ('Survey'), and Description. Under 'Available for Lightning Experience, Experience Builder sites, and the mobile app', the checkbox is checked. The 'Visualforce Markup' tab is selected, showing the following code:

```
<apex:page showheader="false" lightningStylesheets="true">
<html>
<head>
<apex:includeLightning />
<!--Use apex:includeLightning to add the Lightning Components for Visualforce JavaScript library to your Visualforce page-->
</head>
<body class="slds-scope">
<div id="flowContainer" />
<script>
var statusChange = function (event) {
    if(event.getParam("status") === "FINISHED") {
        var outputVariables = event.getParam("outputVariables");
        var key;
        for(key in outputVariables) {
            if(outputVariables[key].name === "myOutput") {
                ...
            }
        }
    }
};
$Lightning.use("c:VFFPageToLC", function() {
    $Lightning.createComponent("lightning:flow", {"onstatuschange":statusChange},
        "flowContainer",
        function (component) {
            component.startFlow("Survey", );
        }
    );
});
</script>
</body>
```

## Step 7: Create a Force.com Site to Open Your Flow for Unauthenticated Access

Now we will create a site to open the flow for unauthenticated access.

1. Click **Setup**.

2. In the Quick Find box, type **Sites**.
3. Clicks on the **New** button.
4. Fill the details as per the screenshot below:
5. Click **Save**.
